Any rights to be receive the ordinary shares from the exercise of the warrants will commence from the date the TSD recorded the number of shares to the shareholders in the system

2. Dilution effect on the existing shareholders from the issuance and offering of the warrant to existing shareholders

1. Control Dilution

$$\text{Formula} = 1 - [Q_o / (Q_o + Q_w)]$$

Where

$$Q_o = \text{The total paid-up shares of 1,108,859,002 shares (par value of THB 1.00 per share)}$$

$$Q_w = \text{Additional shares from the exercise of warrant of 369,619,667 shares}$$

Therefore,

$$\begin{aligned} \text{Control Dilution} &= 1 - [Q_o / (Q_o + Q_w)] \\ &= 1 - [1,108,859,002 / (1,108,859,002 + 369,619,667)] \\ &= 25.00\% \end{aligned}$$

In case of the issuance and offering of warrant to the existing shareholders and the existing shareholders' subscription for the whole amount of warrant, the control dilution of the existing shareholders will not be affected due to the issuance and offering of warrants by pro rata. In case the non-existing shareholders subscribe for the whole amount of warrant, the control dilution of the existing shareholders will be affected by 25.00%

2. Price Dilution

$$\text{Formula} = [(P_o - P_n) \times Q_w] / [(Q_o + Q_w) \times P_o]$$

Where:

$$P_o = \text{The weighted average price of the Company's shares 7 business days before the date of the Board of Directors' meeting on May 12, 2022 (April 29, 2022 – May 11, 2022) which was equal to THB 2.4169 per share)}$$

$$P_n = \text{Exercise price of the warrant offered to the existing shareholders equivalent to THB 2.00 per share}$$

Therefore,

$$\begin{aligned} \text{Price Dilution} &= [(P_o - P_n) \times Q_w] / [(Q_o + Q_w) \times P_o] \\ &= \frac{[(2.4169 - 2.00) \times 369,619,667]}{[(1,108,859,002 + 369,619,667) \times 2.4169]} \\ &= 4.31\% \end{aligned}$$

Because of the exercise price THB 2.00 per ordinary share is the price lower than weighted average of the closing price of the company's shares during 7 days before the date of the Boards of Director's meeting thus, in case the non-existing shareholders subscribe for the whole amount of warrants, the price dilution of existing shareholders will be affected by 4.31%

3. Earnings Dilution

$$\text{Formula} = (\text{EPS}_{\text{So}} - \text{EPS}_{\text{new}}) / \text{EPS}_{\text{So}}$$

Where:

$$\text{EPS}_{\text{So}} = \text{Net profit} / Q_0$$

$$\text{EPS}_{\text{new}} = \text{Net profit} / (Q_0 + Q_w)$$

In the calculation of the effect, the net profit earned by the Company for 2021 of THB 194,013,396.45 is adopted.

Therefore,

$$\begin{aligned} \text{EPS}_{\text{So}} &= \text{Net profit} / Q_0 \\ &= 194,013,396.45 / 1,108,859,002 \\ &= 0.1750 \end{aligned}$$

$$\begin{aligned} \text{EPS}_{\text{new}} &= \text{Net profit} / (Q_0 + Q_w) \\ &= 194,013,396.45 / (1,108,859,002 + 369,619,667) \\ &= 0.1312 \end{aligned}$$

$$\begin{aligned} \text{Earning Dilutions} &= (\text{EPS}_{\text{So}} - \text{EPS}_{\text{new}}) / \text{EPS}_{\text{So}} \\ &= (0.1750 - 0.1312) / 0.1750 \\ &= 25.00\% \end{aligned}$$

After the issue of Warrants to the existing shareholders, if the Warrants are fully exercised, the existing shareholders will be affected from the dilution of Earning by 25.00%

“Net price per share of the newly issued ordinary share” is calculated from division of the total amount of proceeds to be obtained by the Company from such offering of shares, less expenses, by the total number of newly issued ordinary shares.

“Market price per share of the Company’s ordinary share” means the total value of the traded ordinary shares of the Company divided by the number of the ordinary shares of the Company traded on the stock exchange during the 7 consecutive business days (stock trading days) before the calculation date.

in case of the right issues to the existing shareholders and/or the first date of the offering of newly issued shares in case of a public offering and/or in case of a private placement, as the case may be

In case where the “market price per share of the Company’s ordinary share” cannot be figured out as there is no trading transaction in the specified period, the Company will instead determine the fair price.

“Fair price” means the price that is determined by financial advisors approved by the SEC.

If there are more than one offering prices for the newly issued shares and the subscription for the shares at all such prices must jointly be made, all the prices are to be calculated to figure out the net price per share of the newly issued shares.

However, if the offering is not on the condition that it must be jointly subscribed, only the offering price which is lower than 90% of the “market price per share of the Company’s ordinary share” will be used in the calculation
